

Tariff and Transport Line Mass Update Functionality

New import declaration amendment functionality has been implemented to allow Customs Interactive Users to amend Tariff and Transport Details en masse. This change will significantly reduce the time and effort required to amend multi-line declarations. The functionality has been included for the following document types:

- o Nature 10,
- o Nature 20,
- o Nature 10/20, and
- o Low value declarations that use the full declaration format.

The **Tariff Line Mass Update** Hyperlink is available to Customs Interactive users upon amendment (see below).

The Tariff Line Mass Update screen enables users to update values on multiple tariff lines en masse for a single declaration.

The top section of the screen is used to select the fields to be updated, and the new values to be applied. Where a particular field is not normally mandatory it can be updated to a blank value. Where a particular field allows more than one value per line (e.g., AQIS Permit Number, Origin Country Code, and Tariff Classification Instruments), all existing values in that field will be removed from the selected lines and replaced with the new value(s) entered.

The bottom section of the screen is used to select the lines to be updated.

Note: Users will still be able to amend a single line via both hyperlinks.

The **Transport Line Mass Update** Hyperlink is available to Customs Interactive users upon amendment (see below).

The Transport Line Mass Update screen enables authorised users to update values on multiple transport lines en masse for a single declaration.

The top section of the screen is used to select the fields to be updated, and the new values to be applied. Where a particular field is not normally mandatory it can be updated to a blank value.

The bottom section of the screen is used to select the lines to be updated.

Note: Users will still be able to amend a single line via both hyperlinks.
